Last year, The oil company over filled the oil tank. It soaked into the concrete and was difficult to remove. The spill also caused a terrible smell as the vapors seeped into the the rooms adjacent and above the furnace room.
we tried various cleaners and deoderants to no avail.

When I came across your product on a web site, I figured I would give it a try or it would cost me more money to dig out theconcrete.

I then bought a gallon of Vaporremed and sprayed on the spill according to the directions. within an hous the odor of the oil spill dissappeared. I sprayed down the spil every second day so that it would stay damp and allow the vaporremed to keep on working on the spill.

After 10 days there was no smell left but the stain was still there. I believe that I will not hacve any problems with oder from now on

Thank you
Marcel Haist
